

OpenForms Technology is a highly configurable engine that offers the industry's lowest Total Cost of Ownership (TCO).

OpenForms Appraisal Software

OpenForms is the last software you'll ever need because it offers unlimited software updates and unique business models. Our software helps your team improve productivity and create value for your taxpayers!

Configurable

Streamline screens and features to fit the needs at the client and user level. Configure how information is displayed to specific users based on their unique needs.

Data Management

Connect with externally linked databases to gather the information your users need as quickly as possible. Your team can collect the required data without having to coordinate between multiple applications.

Control

Create a collaborative environment between your entire team to increase productivity without wasting resources. Your team will have control over all aspects of your project!

Bulk Adjustments

Update large numbers of properties from a single screen and maintain control over each change you make. Administrators can undo saved changes, so your team can always update information as needed.

OpenForms Collections Software

Improve operational efficiencies and enable better communication with your constituents. OpenForms Collections gives you the flexibility to deploy one or more integrated suites at a time.

Configurable

Enjoy unmatched user configuration and scalability for your jurisdictions' needs for years to come. Your team can configure screens, searches, business rules, and workflows to support how you choose to do business.

Tax Payments

Improve efficiency and create value for your Taxpayers by centralizing all appraisal, tax, permits, and business tax payment information!

Control

OpenForms puts you in total control of your processing environments for years to come. Your team will be able to drive optimal efficiency and productivity by eliminating system obsolescence.

Automation

This means that your team can streamline workflows with the automation of data entry using scanning devices, intelligent cash registers and Lockbox processing or Tax Service Organization (TSO) processing.
