

Desktop Review

Unleash Productivity with Multi-Monitor Workstations

Our Desktop Review (DTR) module is designed to assist assessment jurisdictions in locating new structures, verifying existing data, and flagging discrepancies in data quickly and efficiently via split screens across **multiple** monitors. The configurable layout allows remote data reviewers and/or appraisers to visualize all pertinent property data, photos, aerial imagery, and other assets/tools in one integrated and synchronized view – instead of multiple different tabs, user interfaces and systems. Our DTR also eliminates the need for multiple data entry.

Oblique Imagery View

Get a closer view of subject

Utilizing your existing high quality aerial imagery (ortho and oblique) gives you the experience of being on the property, while at your desktop.

Sketch Editor

Easy sketching at the desktop.

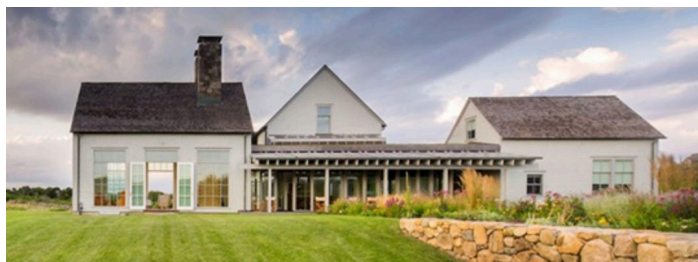

Utilize the same quick, easy and efficient tools from our mobile sketcher.

Instant PhotoBaseSM

High quality images

Access field photos within Desktop Review for additional verifications and data inputs.

Mobile Integration

Take your data to the field with you.

Seamless integration with Harris Govern Mobile. Start with Desktop Review, then assign field visits for additional data verification/data collection needed.
