

GIS Mapping & Deeds Services

Harris Govern - We are your One Stop Shop!

About us

Our company's success was built upon a grass root effort, reinforcing our mission statement to provide and deliver exceptional customer experiences and success.

GIS Parcel Map Layer

Harris Govern provides full Geographic Information System (GIS) services for County Appraisal and City offices. These services include all aspects of a new GIS project and/or the ongoing maintenance of your GIS base map you may already have. You will have peace of mind that GIS Services provided by Harris Govern are always compatible with your Harris Govern software.

Sketch Validation

Sketch Validation overlays sketches from your CAMA system onto aerial photography. Users can rotate and scale sketches to verify against the existing structure on the aerials. From these efforts, parcels can be grouped in to categories customized for your office's needs: confirmed, demolition, field visit, further review, new construction, etc.

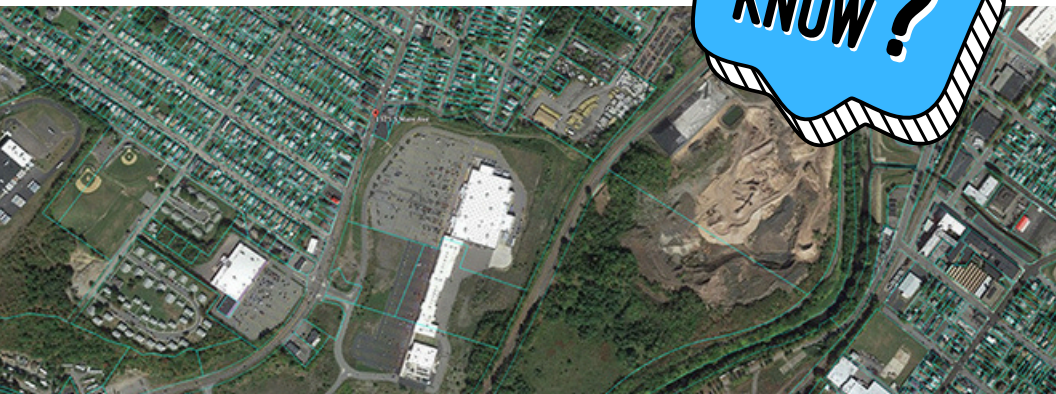

Deeds Processing

The Harris Govern Deeds team will work all property related deeds that you receive from the County clerk in your CAMA system as if they were in your office. Property Splits are performed and then mapped in GIS automatically. Experience the efficiency of this service and its seamless integration within your office and CAMA system.
