

Integrate with any CAMA system, Excel or Access database

Matix is a powerful GIS viewer that is capable of connecting to many different data sources to query data. The data is joined to GIS data elements to allow data visualization with themes and tabular data views. Matix brings your GIS, Aerial and CAMA data together in an easy to use tool you'll use daily. Data is queried in real-time allowing up to the moment data changes to be easily analyzed within the configured theme views.

Custom Theme Views

Thematically maps your queried data

Configure themes as you see fit, not what a vendor thinks. Visualize your data in multiple ways so that you can see outliers and data anomalies quickly and easily.

Seamless EagleView Integration

Get the Most out of your EagleView investment

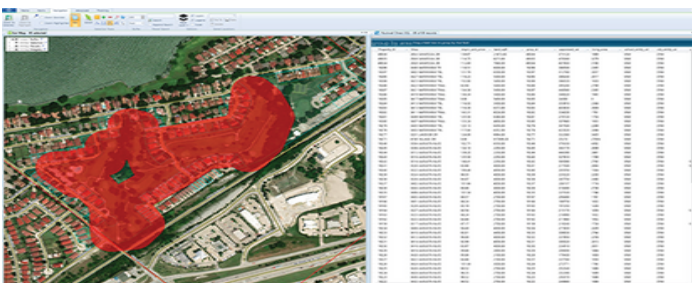

You're already paying for aerial imagery, why not use it in your GIS application as well. With our integration, your GIS and aerial imagery stay in sync with one another.

Custom Data Grids

See everything in one place

View your CAMA data customizable grids so that you can quickly sort and filter your data as necessary. Don't be locked into one view. Change views as often as you need.

Flexible Analysis Tools

Perform data analysis in a snap

Customizable panels allow you to configure your own personal layout views. Switch between saved layouts to get your work completed easily.
